

VINEETH C PANDALAI

**Business Development Manager | UAV Field Operations, Strategy and Scaling |
Enterprise Solution Deployment**

Open to Relocation | vineethcp@gmail.com | +91 (0) 9633 619 961 | [LinkedIn](#)

PROFESSIONAL SUMMARY

Business development and operations leader with 8+ years of experience bridging CXO strategy, enterprise stakeholders, and on-ground technical execution across robotics, UAV systems, and field automation deployments. Proven track record of translating complex deep-tech capabilities into commercially viable deployments by building trust with decision-makers, leading demonstrations and pilots, coordinating cross-functional teams, and driving adoption in high-stakes operational environments.

Hands-on experience working directly with government bodies, enterprise clients, engineering teams, and field operators to scale robotics-driven solutions from pilot stage to large-scale implementation. Brings a rare combination of technical credibility, commercial thinking, customer empathy, and real-world execution experience—well suited for accelerating adoption of construction robotics solutions.

CORE COMPETENCIES

- B2B Enterprise Solution Selling
- UAV Systems Commercialization
- Technical Demos, Pilots & Proof-of-Value Execution
- CXO / Stakeholder Relationship Management
- Go-to-Market Strategy Support
- ROI Analysis & Value Communication
- Cross-functional Collaboration (Product / Engineering / Sales)
- Field Deployment Strategy
- Solution Consulting & Customer Discovery
- Pipeline Development & Opportunity Qualification
- Market Expansion & Strategic Partnerships
- Data-Driven Execution & Reporting

PROFESSIONAL EXPERIENCE

Chief Technology Officer (Execution & Commercial Strategy Focus)

Anuvyom Alliance Pvt. Ltd. | Aug 2025 – Mar 2026

- Supported early-stage aerospace commercialization efforts through technical evaluation, partner engagement, and strategic execution planning.
- Engaged with external stakeholders to present technical capabilities and explore commercial opportunities.
- Evaluated product-market fit across UAV platforms and identified deployment use cases.
- Supported hiring, operational planning, and capability positioning for growth-stage scaling.
- Worked across technical and business functions to align execution with strategic growth priorities.

Operations Manager – UAV Field Operations

TechEagle Innovations Pvt. Ltd. | Nov 2021 – Mar 2025

Led strategic deployment and scale-up of enterprise drone logistics solutions, serving as the critical bridge between leadership, external stakeholders, engineering teams, and field operations.

Key Contributions:

- Scaled drone healthcare delivery operations from pilot stage to 25+ active deployment sites, coordinating directly with senior leadership, public-sector stakeholders, and execution teams.
- Built trusted relationships with decision-makers including government officials, healthcare administrators, and institutional partners to drive solution adoption.
- Conducted high-impact technical demonstrations and field pilots that translated product capabilities into measurable operational value.
- Worked closely with leadership to communicate operational performance, customer needs, deployment risks, and commercial opportunities.
- Converted field insights into actionable product and operational improvements by collaborating directly with engineering teams.
- Led customer-facing discussions around deployment feasibility, implementation planning, and operational ROI.
- Built and mentored multidisciplinary teams including pilots, systems engineers, and project coordinators.
- Delivered presentations and operational reviews to senior stakeholders including external funding and institutional partners.

Commercial Impact: Enabled enterprise-scale adoption of autonomous logistics solutions through strong stakeholder engagement, execution excellence, and value-driven solution positioning.

Project Engineer – Drones for Precision Agriculture Deployment

Dilmah Ceylon Tea Company PLC | Aug 2019 – Mar 2021

Led large-scale drone-based precision agriculture projects, translating advanced sensing technology into measurable operational outcomes.

- Delivered enterprise drone deployments across 10,000+ hectares for enterprise agricultural operations.
- Worked directly with estate leadership and technical stakeholders to identify use cases and communicate solution value.
- Conducted field assessments, solution planning, technical demonstrations, and implementation support.
- Generated operational insights that improved resource utilization and decision-making.

Customer Relations Manager

Honda Motorcycle & Scooter India | Dec 2018 – Aug 2019

- Managed customer-facing operations and service delivery in a high-volume environment.
- Strengthened stakeholder communication, issue resolution, and customer trust-building capabilities.
- Developed strong commercial communication and relationship management skills.

KEY ACHIEVEMENTS

- Built and scaled one of Asia's earliest operational drone delivery networks.
- Established operational infrastructure from ground zero in remote deployment environments.
- Hired and trained 15+ technical professionals for mission-critical operations.
- Successfully presented deep-tech capabilities to CXOs, institutional stakeholders, and operational users.
- Consistently translated technical complexity into practical business outcomes.
- Developed actionable field-driven product improvement recommendations based on frontline operational insights.

EDUCATION

Master's degree in Mechanical Engineering, Linköping University, Linköping, Sweden

Bachelor's degree in Automobile Engineering, Mahatma Gandhi University, Kerala, India

WHY I FIT FLO MOBILITY

- Deep robotics and autonomous systems deployment experience
- Proven ability to build trust with both CXOs and field execution teams
- Strong understanding of translating technical products into customer value
- Field-first perspective on operational pain points and automation opportunities
- Demonstrated ability to identify deployment use cases and commercialization pathways
- Comfortable with extensive travel, site work, pilots, and fast-moving startup environments
